

# BIBTEX bibliography style file **csecn** for the Council of Science Editors citation–name citation style

David Lamkin\*

July 1, 2026

There are three new BIBTEX bibliography style files to assist with the preparation of a bibliography more or less in the latest CSE (ninth edition) styles:

- **csecn.bst** is an adaptation of **plainnat.bst** that produces a bibliography in CSE citation–name style
- **csecs.bst** is an adaptation of **unsrtnat.bst** that produces a bibliography in CSE citation–sequence style
- **cseny.bst** is an adaptation of **plainnat.bst** that produces a bibliography in CSE name–year style

The most significant features in these new style files are as follows:

- they work with **natbib 8.31b** to produce `\bibitem` entries in the form `\bibitem[Jones et~al(1990)Jones, Baker and Smith]{key}...`
- the number of authors' (or editors') names in the list is limited to a maximum of five, or truncated to one 'et al'
- DOI is used as first choice of online source: the style file outputs the DOI if both `doi` and `url` are in the database entry, or the URL (plus access date, if given) if there is no `doi`, with no closing full point in either case
- book entries can contain editors, translators and illustrators in addition to/instead of authors
- `@article` entries can contain an editor in place of an author, for citing a special issue or special section of a journal
- the non-standard entry types `@magazine`, `@newspaper` and `@webpage` are recognised for compatibility with other bibliography styles

This document describes the **csecn.bst** BIBTEX bibliography style and is a work in progress. It will eventually become a complete user guide with examples and discussion.

## Setting up to use the style file

While the style file is in development (and so not installed as part of any L<sup>A</sup>T<sub>E</sub>X distribution) it will need to be acquired and placed in the same directory as the .tex document for which you would like to create the bibliography.

The .bst file is fully compatible with the natbib, doi and hyperref packages. I have found the preamble settings

```
\usepackage[numbers,sort&compress]{natbib}
\bibpunct[, ]{[ ]}{,}{n}{,}{,}

\usepackage{doi}
\usepackage{hyperref}
\renewcommand{\doitext}{https://doi.org/}
\urlstyle{same}
```

useful during development and testing.

## New (non-standard) entry types

### The @magazine, @newspaper and @periodical entry types

These are (currently) just synonyms for the @article entry type, recognised for compatibility with other bibliography styles such as apacite that use them. They all have the same required fields as an @article, with the added option of editor instead of author for citing a special issue or a special section. (With the current version of this bibliography style, the @article entry type suffices in the BIB<sub>T</sub>E<sub>X</sub> database, whatever type of periodical the article appears in.) The @periodical synonym, although non-standard, might make a good entry type to use when an entire issue, or even a section, e.g. a special issue of a journal, is cited, precisely because this is *not* referring to an individual article:

```
@periodical{Goo99,
  editor = {Good, Thomas L.},
  title = {Non-Subject-Matter Outcomes of Schooling},
  note = {Special issue},
  journal = {Elementary School J},
  volume = 99,
  number = 5,
  year = 1999
}
```

The title here is that of the issue, not of an article. The @article entry type would also work just as well for this purpose.

## The @webpage entry type

This is (currently) just a synonym for the @misc entry type, and likewise has no required fields; both have the added option of **editor** instead of **author** for citing an item with an editor. This entry type is so named after that created by Norman Gray’s `urlbst` package for compatibility.

## New (non-standard) fields

### The translator field

This is included so that @book and @inbook entries can contain a translator in addition to/instead of an author and/or editor, and @incollection entries can contain a translator as well as an author and an editor (although there will be some ambiguity in regard to whether the translator in an @incollection has translated the chapter being cited or the whole collection). For example:

```
@book{Luz85,  
  author = {Luzikov, V. N.},  
  translator = {Galkin, A. V.},  
  editor = {Roodyn, D. B.},  
  year = 1985,  
  title = {Mitochondrial Biogenesis and Breakdown},  
  publisher = {Consultants Bureau}  
}
```

BIB<sub>TEX</sub> will not complain that you *can’t use both author and editor fields* in a @book entry (because with `csecn.bst`, you *can*), but will instead issue a warning that you have done so, in case this was inadvertent.

In order to output “secondary” editors and translators, the **author** field in the bibentry must be non-empty—so if such a book ever has an author that is not a person’s name, it should be formatted as **author = {{...}}** rather than using a **key** (because the latter is too far down BIB<sub>TEX</sub>’s pecking order for selecting what to use as the label).

### The illustrator field

This is included so that book entries can contain an illustrator in addition to/instead of a (secondary) editor/translator, for use in citing references where the illustrations represent a noteworthy contribution to the publication.

## Citing references in the text

Citation in the text is generally by number only, using `\cite{key}`, e.g. ‘[1]’.

If the name(s) of the author(s) need(s) to appear in the in-text reference, the `\citet{key}` form can be used. For works with two authors, give both authors’

surnames, e.g. ‘Fauci and Lane [11]’; if a reference has three to five authors, generally give only the first author’s name followed by ‘et al’, e.g. ‘Haasnoot et al [14]’ in the text—unless there is a need for disambiguation, in which case the `\citet*{key}` form can be used and will produce e.g. ‘Haasnoot, Lawrence and Magnan [14]’—while listing all the names in the end reference; if there are more than five authors, give only the first author’s name followed by ‘et al’, e.g. ‘Agarwal et al [1]’ in the text, since this is all that will need to appear in the list.

Below are the sample citations from the *CSE Manual Online*, using the `\citet{key}` form for demonstration purposes.

### Articles

Haasnoot et al [14]  
Ashraf et al [3]  
Kim and Kim [17]  
Yohannes et al [25]  
Bhaskar et al [4]
