

BIB_TE_X bibliography style file `csecs.bst` for the Council of Science Editors citation–sequence citation style

David Lamkin*

August 16, 2026

There are three new BIB_TE_X bibliography style files to assist with the preparation of a bibliography more or less in the latest CSE (ninth edition) styles:

- `csecn.bst` is an adaptation of `plainnat.bst` that produces a bibliography in CSE citation–name style
- `csecs.bst` is an adaptation of `unsrtnat.bst` that produces a bibliography in CSE citation–sequence style
- `cseny.bst` is an adaptation of `plainnat.bst` that produces a bibliography in CSE name–year style

The most significant features in these new style files are as follows:

- they work with `natbib 8.31b` to produce `\bibitem` entries in the form `\bibitem[Jones et~al(1990)Jones, Baker and Smith]{key}...`
- the number of authors' (or editors') names in the list is limited to a maximum of five, or truncated to one 'et al'
- DOI is used as first choice of online source: the style file outputs the DOI if both `doi` and `url` are in the database entry, or the URL (plus access date, if given) if there is no `doi`
- book entries can contain editors, translators and illustrators in addition to/instead of authors
- `@article` entries can contain an editor in place of an author, for citing a special issue or special section of a journal
- entry types `@magazine`, `@newspaper`, `@periodical`, `@online` and `@webpage` are recognised for compatibility with other bibliography styles

This document describes the `csecs.bst` BIB_TE_X bibliography style and is a work in progress.

*Email: formatwithstyle@outlook.com

Setting up to use the style file

While the style file is in development (hence not yet in CTAN or installed as part of any L^AT_EX distribution) it will need to be downloaded from my GitHub repository and placed in the same directory as the .tex document for which you would like to create the bibliography.

The `csecs.bst` file is fully compatible with the `natbib`, `doi` and `hyperref` packages. I have found the preamble settings

```
\usepackage[numbers,sort&compress]{natbib}
\bibpunct[, ]{[}{]}{,}{n}{,}{,}
```

```
\usepackage{doi}
\usepackage{hyperref}
\renewcommand{\doitext}{https://doi.org/}
\urlstyle{same}
```

useful during development and testing.

New (non-standard) entry types

The @magazine, @newspaper and @periodical entry types

These are (currently) just synonyms for the `@article` entry type, recognised for compatibility with other bibliography styles that use them. They all have the same required fields as an `@article`, with the added option of `editor` instead of `author` for citing a special issue or a special section. The `journal` field is always used for the title of the publication. (With the current version of this bibliography style, the `@article` entry type suffices in the B_IB_TE_X database, whatever type of periodical the article appears in.)

The `@periodical` synonym, although non-standard, might make a good entry type to use when an entire issue, or even a section, e.g. a special issue of a journal, is cited, precisely because this is *not* referring to an individual article:

```
@periodical{Goo99,
  editor = {Good, Thomas L.},
  title = {Non-Subject-Matter Outcomes of Schooling},
  note = {Special issue},
  journal = {Elementary School J},
  volume = 99,
  number = 5,
  year = 1999
}
```

The `title` here is that of the issue, not of an article. (The `@article` entry type would also work just as well for this purpose.)

The @online and @webpage entry types

These are (currently) just synonyms for the @misc entry type, recognised for compatibility with other bibliography styles that use them. Like @misc, they have no required fields; all have the added option of `editor` instead of `author` for citing an online item with an editor. The alias to @misc is made because that is how websites/online publications will have been stored in many BIBTEX databases. Hence there are no required fields, because some of those entries will have a lot of the information in a `note` or `howpublished` field—this is fine; best results may be obtained by also using `url`, `month`, and where applicable `lastchecked` (or `urldate`).

New (non-standard) fields

The translator field

This is included so that @book and @inbook entries can contain a translator in addition to/instead of an author and/or editor, and @incollection entries can contain a translator as well as an author and an editor. For example:

```
@book{Luz85,
  author = {Luzikov, V. N.},
  translator = {Galkin, A. V.},
  editor = {Roodyn, D. B.},
  year = 1985,
  title = {Mitochondrial Biogenesis and Breakdown},
  publisher = {Consultants Bureau}
}
```

BIBTEX will not complain that you *can't use both author and editor fields* in a @book entry (because with `csecs.bst`, you *can*), but will instead issue a warning that you have done so, in case this was inadvertent.

In order to output “secondary” editors and translators (as in the above example), the `author` field in the bibentry must be non-empty—so if such a book ever has an author that is not a person's name, it should be formatted as `author = {{...}}` rather than using a `key`, because the latter is too far down BIBTEX's pecking order for selecting what to use as the label. It is worth noting at this point that `csecs.bst` will always make the label for a book item from the contents of the `author` field if there is one; if there is no `author` it will next look for an `editor` and begin with that; if there is no `editor` either, it will look for a `translator`; if there is no `translator` it will then look for a `key`.

The illustrator field

This is included so that book entries can contain an illustrator in addition to/instead of a (secondary) editor and/or translator, for references where the illustrations represent a noteworthy contribution to the publication.

```

@book{Ngu21,
  author = {Nguyen-Kim, M. T.},
  title = {Komisch, alles chemisch! [{C}hemistry for Breakfast: The
    Amazing Science of Everyday Life]},
  translator = {Pybus, S.},
  illustrator = {Lenkova, C.},
  publisher = {Greystone Books},
  year = 2021,
  note = {German, English}
}

```

Some notes and remarks

Technical reports

The CSE Manual [1, p 685] stipulates the need to identify both the sponsoring organization and the performing organization, and to specify which of these has published a report. The current version of `csecs.bst` accommodates one scenario, “written and published by the sponsoring organization”, by default; another scenario, “written and published by the performing organization”, may be achieved by “misusing” the `institution` field for the performing organization and the `note` field for the sponsoring organization. The default type is set to “Report”, which can be overridden if required using the `type` field.

Conference proceedings and conference papers

I would like to make provision for including in a `BIBTEX` database the date and place a conference was held, although this is not entirely straightforward. Since the address of a publisher is no longer output in CSE style, the `month` and `address` fields could, in theory, be used in `@proceedings` and `@inproceedings` entries to achieve this. As Oren Patashnik has written:

The `PROCEEDINGS` and `INPROCEEDINGS` entry types now use the `address` field to tell where a conference was held, rather than to give the address of the publisher or organization (`BIBTEXing`, 1988, 7)

This does seem to leave the user to decide between putting the conference date in the `month` field or typing it into the `title`. Moreover, this use of the `address` field seems not to have become standard practice in many `BIBTEX` bibliography styles.

Using the former method, you could say something like:

```

@proceedings{LeSa10,
  editor = {Lechevallier, Yves and Saporta, Gilbert},
  title = {{Proceedings of COMPSTAT 2010. 19th International
    Conference on Computational Statistics}},
  month = "2010 " # aug # "~22--27",

```

```

address = {Paris, France},
year = 2010,
publisher = {Physica-Verlag},
doi = {10.1007/978-3-7908-2604-3}
}

```

This will work with `csecs.bst`—but please be aware that the results of using any other bibliography style files on such database entries cannot be guaranteed!

If you would rather not use those fields in this way, you can do as follows:

```

@proceedings{LeSa10,
  editor = {Lechevallier, Yves and Saporta, Gilbert},
  title = {{Proceedings of COMPSTAT 2010. 19th International
  Conference on Computational Statistics; \textup{2010 Aug~22--27;
  Paris, France}}},
  year = 2010,
  publisher = {Physica-Verlag},
  doi = {10.1007/978-3-7908-2604-3}
}

```

This is a more reliable way to obtain consistent results from a `BIBTEX` database. The `\textup{}` command is to protect the marked text from being italicised when using other bibliography styles which might set conference titles in italics (because I think the date and location are not part of the actual title).

Dissertations and theses

To reduce the possibility of confusion between usages of the term “thesis” in different countries, the default types for `@phdthesis` and `@mastersthesis` entries are set to “PhD dissertation” and “master’s thesis” respectively. These can be overridden if required using the `type` field.

Citing references in the text

Citation in the text is generally by number only, using `\cite{key}`, e.g. ‘[1]’.

If the name(s) of the author(s) need(s) to appear in the in-text reference, the `\citet{key}` form can be used. For works with two authors, give both authors’ surnames, e.g. ‘Fauci and Lane [2]’; if a reference has three to five authors, generally give only the first author’s name followed by ‘et al’, e.g. ‘Haasnoot et al [3]’ in the text—unless there is a need for disambiguation, in which case the `\citet*{key}` form can be used and will produce e.g. ‘Haasnoot, Lawrence and Magnan [3]’—while listing all the names in the end reference; if there are more than five authors, give only the first author’s name followed by ‘et al’, e.g. ‘Agarwal et al [4]’ in the text, since this is all that will need to appear in the list.

Below are the sample citations from the *CSE Manual Online*, using the `\citet{key}` form for demonstration purposes.

Articles

Haasnoot et al [3]
Ashraf et al [5]
Kim and Kim [6]
Yohannes et al [7]
Bhaskar et al [8]
Bibi et al [9]
Liu et al [10]

Books

De Doncker et al [11]
