BibTeX bibliography style file `cseny.bst` for the Council of Science Editors name–year citation style

David Lamkin*

November 8, 2026

There are three new BibTeX bibliography style files to assist with the preparation of a bibliography more or less in the latest CSE (ninth edition) styles:

- `csecn.bst` is an adaptation of `plainnat.bst` that produces a bibliography in CSE citation–name style
- `csecs.bst` is an adaptation of `unsrtnat.bst` that produces a bibliography in CSE citation–sequence style
- `cseny.bst` is an adaptation of `plainnat.bst` that produces a bibliography in CSE name–year style

The most significant features in these new style files are as follows:

- they work with `natbib 8.31b` to produce `\bibitem` entries in the form `\bibitem[Jones et~al(1990)Jones, Baker and Smith]{key}...`
- the number of authors' (or editors') names in the list is limited to a maximum of five, or truncated to one 'et al'
- DOI is used as first choice of online source: the style file outputs the DOI if both `doi` and `url` are in the database entry, or the URL (plus access date, if given) if there is no `doi`
- book entries can contain editors, translators and illustrators in addition to/instead of authors
- `@article` entries can contain an editor in place of an author, for citing a special issue or special section of a journal
- entry types `@magazine`, `@newspaper`, `@periodical`, `@online` and `@webpage` are recognised for compatibility with other bibliography styles

This document describes the `cseny.bst` BibTeX bibliography style and is a work in progress.

*Email: formatwithstyle@outlook.com

Setting up to use the style file

While the style file is in development (hence not yet in CTAN or installed as part of any LaTeX distribution) it will need to be downloaded from my GitHub repository and placed in the same directory as the `.tex` document for which you would like to create the bibliography.

The `cseny.bst` file is fully compatible with the `natbib`, `doi` and `hyperref` packages. I have found the preamble settings

```
\usepackage[sort]{natbib}
\bibpunct[, ]{(}{)}{;}{a}{}{,}

\usepackage{doi}
\usepackage{hyperref}
\renewcommand{\doitext}{https://doi.org/}
\urlstyle{same}

\newcommand{\csemonth}[1]{\ifcase #1\or Jan\or Feb\or Mar\or Apr\or
   May\or Jun\or Jul\or Aug\or Sep\or Oct\or Nov\or Dec\else
   {#1}\fi}

\defcitealias{ALS20}{ALSG 2020}
\defcitealias{Eng20}{Engelhardt et~al 2020}
\defcitealias{Hea20}{Health equity\ldots2020}
\defcitealias{MPBnd}{Montrose Point\ldots[date unknown]}
```

useful during development and testing.

The `\newcommand{\csemonth}` macro is required in order to assist `cseny.bst` with sorting references by *year, month and day* (if a `month` is given), even though for journal articles the month does not routinely appear in the output.

The `\defcitealias` commands are for the citations in this document with which `natbib` needs some help in forming the in-text references, which do not exactly match the end references to which they link.

New (non-standard) entry types

The `@magazine`, `@newspaper` and `@periodical` entry types

These are (currently) just synonyms for the `@article` entry type, recognised for compatibility with other bibliography styles that use them. They all have the same required fields as an `@article`, with the added option of `editor` instead of `author` for citing a special issue or a special section. The `journal` field is always used for the title of the publication. (With the current version of this bibliography style, the `@article` entry type suffices in the BibTeX database, whatever type of periodical the article appears in.)

The `@periodical` synonym, although non-standard, might make a good entry type to use when an entire issue, or even a section, e.g. a special issue of a journal, is cited, precisely because this is *not* referring to an individual article:

```
@periodical{Goo99,
  editor = {Good, Thomas L.},
  title = {Non-Subject-Matter Outcomes of Schooling},
  note = {Special issue},
  journal = {Elementary School J},
  volume = 99,
  number = 5,
  year = 1999
}
```

The `title` here is that of the issue, not of an article. (The `@article` entry type would also work just as well for this purpose.)

The `@online` and `@webpage` entry types

These are (currently) just synonyms for the `@misc` entry type, recognised for compatibility with other bibliography styles that use them. Like `@misc`, they have no required fields; all have the added option of `editor` instead of `author` for citing an online item with an editor. The alias to `@misc` is made because that is how websites/online publications will have been stored in many BibTeX databases. Hence there are no required fields, because some of those entries will have a lot of the information in a `note` or `howpublished` field— this is fine; best results may be obtained by also using `url`, `month`, and where applicable `lastchecked` (or `urldate`).

New (non-standard) fields

The `translator` field

This is included so that `@book` and `@inbook` entries can contain a translator in addition to/instead of an author and/or editor, and `@incollection` entries can contain a translator as well as an author and an editor. For example:

```
@book{Luz85,
  author = {Luzikov, V. N.},
  translator = {Galkin, A. V.},
  editor = {Roodyn, D. B.},
  year = 1985,
  title = {Mitochondrial Biogenesis and Breakdown},
  publisher = {Consultants Bureau}
}
```

BibTeX will not complain that you *can't use both author and editor fields* in a `@book` entry (because with `cseny.bst`, you *can*), but will instead issue a warning that you have done so, in case this was inadvertent.

In order to output "secondary" editors and translators (as in the above example), the `author` field in the bibentry must be non-empty—so if such a book ever has an author that is not a person's name, it should be formatted as `author = {{...}}` rather than using a `key`, because the latter is too far down BibTeX's pecking order for selecting what to use as the label. It is worth noting at this point that `cseny.bst` will always make the label for a book item from the contents of the `author` field if there is one; if there is no `author` it will next look for an `editor` and begin with that; if there is no `editor` either, it will look for a `translator`; if there is no `translator` it will then look for a `key`.

The `illustrator` field

This is included so that book entries can contain an illustrator in addition to/instead of a (secondary) editor and/or translator (for references where the illustrations represent a noteworthy contribution to the publication).

```
@book{Ngu21,
  author = {Nguyen-Kim, M. T.},
  title = {Komisch, alles chemish! [{C}hemistry for Breakfast: The
  Amazing Science of Everyday Life]},
  translator = {Pybus, S.},
  illustrator = {Lenkova, C.},
  publisher = {Greystone Books},
  year = 2021,
  note = {German, English}
}
```

Some notes and remarks

Book series

The CSE manual has the titles of book series set in "Sentence case". The use of braces to protect capital letters in a `series` field as well as in a `title` seems hardly to be mentioned, so to minimise inconvenience, in the current version these are set to output in "Title Case" without changing unprotected capital letters to lower case.

Dissertations and theses

To reduce the possibility of confusion between usages of the term "thesis" in different countries, the default types for `@phdthesis` and `@mastersthesis` entries are set to "PhD dissertation" and "master's thesis" respectively. These can be overridden if required using the `type` field.

Conference proceedings and conference papers

I would like to make provision for including in a BibTeX database the date and place a conference was held, although this is not entirely straightforward. Since the address of a publisher is no longer output in CSE style, the `month` and `address` fields could, in theory, be used in `@proceedings` and `@inproceedings` entries to achieve this. As Oren Patashnik has written:

> The `PROCEEDINGS` and `INPROCEEDINGS` entry types now use the address field to tell where a conference was held, rather than to give the address of the publisher or organization (BibTeXing, 1988, 7)

This does seem to leave the user to decide between putting the conference date in the `month` field or typing it into the `title`. Moreover, this use of the `address` field seems not to have become standard practice in many BibTeX bibliography styles.

Using the former method, you could say something like:

```
@proceedings{LeSa10,
  editor = {Lechevallier, Yves and Saporta, Gilbert},
  title = {{Proceedings of COMPSTAT 2010. 19th International
  Conference on Computational Statistics}},
  month = "2010 " # aug # "~22--27",
  address = {Paris, France},
  year = 2010,
  publisher = {Physica-Verlag},
  doi = {10.1007/978-3-7908-2604-3}
}
```

This will work with `cseny.bst`—but please be aware that the results of using any other bibliography style files on such database entries cannot be guaranteed!

If you would rather not use those fields in this way, you can do as follows:

```
@proceedings{LeSa10,
  editor = {Lechevallier, Yves and Saporta, Gilbert},
  title = {{Proceedings of COMPSTAT 2010. 19th International
  Conference on Computational Statistics; \textup{2010 Aug~22--27;
  Paris, France}}},
  year = 2010,
  publisher = {Physica-Verlag},
  doi = {10.1007/978-3-7908-2604-3}
}
```

This is a more reliable way to obtain consistent results from a BibTeX database. The `\textup{}` command is to protect the marked text from being italicised when using other bibliography styles which might set conference titles in italics (because I think the date and location are not part of the actual title).

Technical reports

The CSE manual (2024, p 685) stipulates the need to identify both the sponsoring organization and the performing organization, and to specify which of these has published a report. The current version of `cseny.bst` accommodates one scenario, "written and published by the sponsoring organization", by default; another scenario, "written and published by the performing organization", may be achieved by "misusing" the `institution` field for the performing organization and the `note` field for the sponsoring organization. See the examples in the `csedemo.bib` demonstration database for explanatory details. The default type is set to "Report", which can be overridden if required using the `type` field.

Citing references in the text

For works with two authors, give both authors' surnames, e.g. '(Fauci and Lane 2020)'; if a reference has three to five authors, generally give only the first author's name followed by 'et al', e.g. '(Haasnoot et al 2021)' in the text—unless there is a need for disambiguation, in which case the 'starred form' `\cite*` command can be used and will produce e.g. '(Haasnoot, Lawrence and Magnan 2021)'—while listing all the names in the end reference; if there are more than five authors, give only the first author's name followed by 'et al', e.g. '(Agarwal et al 2022)' in the text, since this is all that will need to appear in the list.

Below are the sample name–year citations from the *CSE Manual Online*, plus a select few from the print edition edition (marked with an asterisk).

Articles

Fauci and Lane (2020)
Haasnoot et al (2021)
Lee et al (2020a)
Lee et al (2020b)
Kim and Kim (2020)
Yohannes et al (2018)
Bhaskar et al (2022)
Bibi et al (2017)
Liu et al (2020)

Books

Reiss and Ruse (2023)
De Doncker et al (2020)
(ALSG 2020)
Gupta (2021)
Klarsfeld and Revah (2003)
Luzikov (1985)
Everard (2017)

Geisslitz and Scherf (2021)
Rabinovich et al (2019)
Agarwal et al (2022)
Morris (c1992)* (a book with a date of copyright)
Tripler ([1857?])* (a book with an estimated date of publication)
Zhou et al (2020)* (a volume in a series)

Dissertations and Theses

Liang (2020)

Patents

(Engelhardt et al 2020)

Newspapers

Zimmer (2021a)
Zimmer (2021b)* (a newspaper article consulted in print)

Websites

(Health equity. . . 2020)
(Montrose Point. . . [date unknown])

Technical Reports

Page and Harney (2001)* (written and published by its sponsor)
Miller et al (2021)* (written and published by the performing organization)

Conference Proceedings

He et al (2019)*

Forthcoming or Unpublished Material

Kasper et al (Forthcoming 2026)
Lopez Bernal et al (2021)
Corrigan and Businger (2021)
Charles and Gordner (2005)

This guide also contains some additional worked examples (Good 1999; Lechevallier and Saporta 2010; Nguyen-Kim 2021) not listed on the web page. More example entries can be found in the `csedemo.bib` demonstration database in my GitHub repository.

The list of references

References are listed in alphabetical order by author, then chronologically. If there is no identifiable author, use e.g. '(Health equity... 2020)'. The year of publication is required for most reference types; for newspaper articles and patents, provide the full date of publication including the month and day of the month. If no date of publication is available, use '[date unknown]' in its place.
